

Safety barrier per kart and mini bikes tracks

Composition

Internal padding in agglomerate of polyurethane foam, external coating in washable rubberized fabric
Hot welding and high resistance straps to connect barriers together

Utilization

Protections for indoor and outdoor karting and mini-bikes tracks

Laying

At dangerous points to reduce consequences of impact in case of crash. The barriers can be joined together by high resistance belts which cross them internally

Technical details

Dimensions REGULAR cm. 200 x 30 x 30
 BIG cm. 200 x 50 x 50

Weight REGULAR 20 kg.
 BIG 45 kg.

Fire reaction internal padding is certified in compliance with FMV SS 302
 fabric cover class 1

Features :

- high and progressive impact absorption without "rebound" effect
- return to the original thickness after compression
- no damage even in the case of violent impacts
- incorporated straps to join the barriers together through slots at the ends
- covered by fire retardant rubberized fabric
- hot welded joints
- reinforced eyelets with patches glued inside the lining
- internal padding in slow combustion material
- suitable for both indoors and outdoors

Available colors red, light blue, light grey, green. Other colours available on request for quantities
